

Job Description | **Software Developer**

FinEdge Advisory Private Limited | www.finedge.in | careers@finedge.in

Job title: Software Developer

Work Experience: 1-3 years

Reporting to: Chief Information Officer

Salary: As per industry standards & current CTC

Hours: 9:30 AM to 6:30 PM, Monday to Saturday (1st & 3rd Saturdays off)

Location: Gurgaon

Purpose of the position

The role of the full-stack Software Developer (SD) will be to work closely with the FinEdge Management to build software systems from scratch, in a bottom up manner. These systems would include those related to Financial Planning, Portfolio Management, Financial Goal Mapping, DIY (Do It Yourself) Investing, CRM and Portfolio Reviews, among others. Over time, the SD will play a critical role in the overall functioning of the business, by continuously building, improving and refining internal and external systems to add value to the overall client experience.

Key Responsibilities & duties

- Business requirement analysis, review and implementation
- Technical design, implementation, deployment, and support
- Writing code and designing new applications from scratch
- Performing development and unit testing, working closely with Business.
- Reviewing designs and performing code reviews.
- Ensuring designs are in compliance with specifications
- Contributing to all phases of the development lifecycle
- Developing high-volume, low-latency applications for mission-critical systems and delivering high-availability and performance

Academic qualifications / Desired candidate profile

- B.Tech./MCA in Computer Science or equivalent
- High levels of proficiency in OOPS, CodeIgniter, Core PHP, MySQL, jQuery, Javascript, Apache & Ubuntu OS
- Experience in working with CSS/HTML on complex projects
- Working knowledge of Python 2/3
- Demonstrable ability to build API's and cohesively & seamlessly bind platforms together
- Ability to visualize and design highly impactful client interfaces and dashboards, with proven & demonstrable work experience in the area
- Past experience in developing systems for the Financial Services industry would be an added advantage
- Collaborative approach, ability to work in Teams
- A deep understanding of what it takes to write software that is used by thousands

Work experience & skills

1-3 years of experience designing and developing applications with high availability and reliability
